Consistency of data, processes and systems will enable users to generate new knowledge faster and create value

	Data Management and Discovery	Application Access	Multimodal AI and Analytics	Scientific Models
People	Quickly find the data you need	Easily find, deploy and run analytical tools	Consistently analyze different datasets without advanced skills	Faster access to knowledge database for integrated learning
Processes	Abstracted and consistent access to data, released from therapeutic silos	Consistent tools deployment and access across platform, without duplication or customisation	Move data prep and analytics/ML from the hands of few selected people to everyone	Consult knowledge base consistently from a single point of access
Systems	Integrated data layer to de-silo data for consistency and search solution for quick access	Abstracted tooling platform	Data analytics as a service (ML/Analytics pipelines templates; democratize ML tools)	Data sharing platforms
